Omni**WMS**
Warehouse Management System

Omni WMS is a warehouse management system that consists of desktop applications and portable (PDT) devices designed to optimize and accelerate the reception, issuance, and movement of goods through the warehouse.

With the help of a desktop application, the operator manages the receive and shipping orders, assigns tasks to the devices, monitors the inventory and status of devices assigned to the warehouse. Operators with PDTs handle orders through a warehouse by reading barcode items.

Omni WMS can be linked to any business program of newer generations such as Datalab Pantheon, Microsoft NAV, SAP, and the like.

High degree of accuracy of goods address locations

Increase order processing capacity

Improving the precision of delivery of ordered goods

Optimization of warehousing goods in the warehouse

Significant acceleration of receipt and release of goods

Complete check of stocks

100% free of paper

Modern design

Omnisoft is a company with a longtime expirience in implementation of business infomation solutions. Besides ERP information solutions we sucessfully develop and implement vertical solutions which give our partners additional benefits in using software. Also, we develop specialized solutions tailor made to the needs of our clients which we design together.

Our vision is to produce constant market advantage to our clients and partners providing them solutions and services which have more value than others.
